

## Non-Synchronous PWM Boost Controller

### General Description

The FP5138 is a boost switching regulator controller IC for battery-used applications. The FP5138 includes a totem-pole output stage for driving NPN transistor or N-MOS, high precision reference (0.5V) for comparing output voltage by feedback amplifier, precision maximum duty cycle control, programmable soft start with short circuit protection function and operating mode control between operation and standby mode.

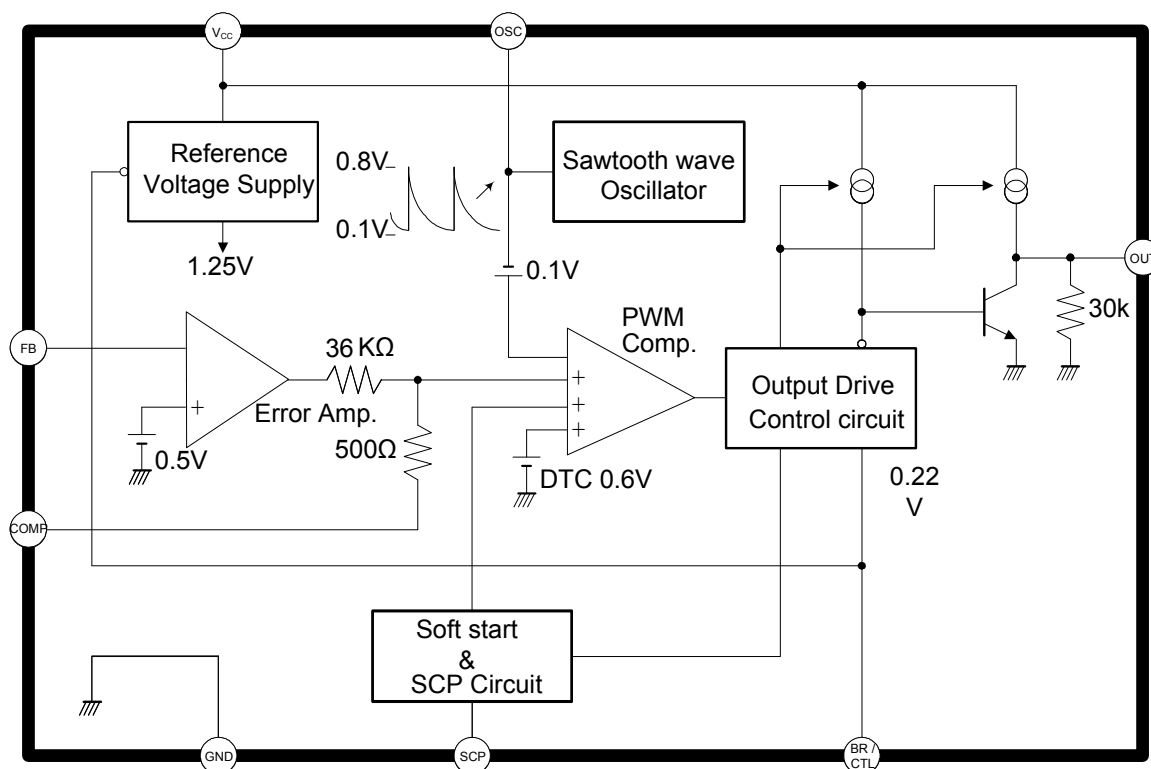

### Features

- Wide Supply Voltage Operating Range: 1.8 to 15V
- Reference Voltage Precision: 2%
- Low Current Consumption: 5.5mA in Operation Mode
- Low Current Consumption: 1μA in Standby Mode
- High Oscillator Frequency: 1MHz max.
- Programmable Soft Start Function (SS)
- Short Circuit Protection Function (SCP)
- Totem-Pole Output with Adjustable ON / OFF Current (for NPN Transistors or n-Channel MOSFET)
- Logic Level Control Stand-by Mode Function
- Package: SOP-8L and TSSOP-8L

### Applications

- Digital Camera
- PDA
- Portable Equipment

## Function Block Diagram

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.

## Pin Descriptions

### SOP-8L

### TSSOP-8L

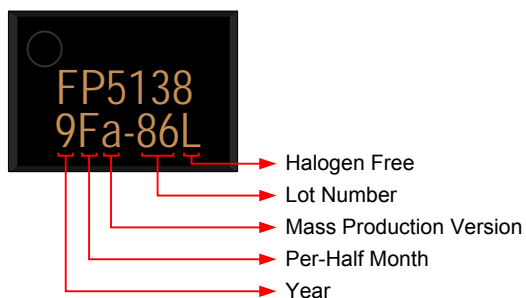

Name	No.	I / O	Description
FB	1	I	Error Amplifier Inverting Input
SCP	2	I	Soft Start and SCP Function Connect a Capacitor to this pin
V <sub>CC</sub>	3	P	IC power supply
BR / CTL	4	I	Output Current Setting and Control
OUT	5	O	Totem-Pole Output
GND	6	P	IC Ground
OSC	7	I	Oscillator Output: Connect Capacitor and Resistor to this pin for Frequency Adjustment
COMP	8	O	Error Amplifier Compensation Output

## Marking Information

### SOP-8L

### TSSOP-8L

**Halogen Free:** Halogen free product indicator

**Lot Number:** Wafer lot number's last two digits

For Example: 132386TB → 86

**Internal ID:** Internal Identification Code n

**Per-Half Month:** Production period indicated in half month time unit

For Example: January → A (Front Half Month), B (Last Half Month)

February → C (Front Half Month), D (Last Half Month)

**Year:** Production year's last digit

## Ordering Information

Part Number	Operating Temperature	Package	MOQ	Description
FP5138DR-LF	-10°C ~ +85°C	SOP-8L	2500EA	Tape & Reel
FP5138BWR-LF	-10°C ~ +85°C	TSSOP-8L	2500EA	Tape & Reel

## Absolute Maximum Ratings

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Power Supply Voltage	$V_{IN}$				15	V
Output Source Current			-50			mA
Output Sink Current					50	mA
Allowable Power Dissipation		SOP-8L, $T_A \leq +25^\circ\text{C}$			570	mW
		TSSOP-8L, $T_A \leq +25^\circ\text{C}$			400	mW
Operating Temperature			-10		+85	°C
Storage Temperature			-55		+125	°C
Junction Breakdown Temperature	$T_J$				+125	°C
Lead Temperature		SOP-8L, soldering, 10 sec			+260	°C
		TSSOP-8L, soldering, 10 sec			+260	°C

## IR Re-flow Soldering Curve

## Function Description

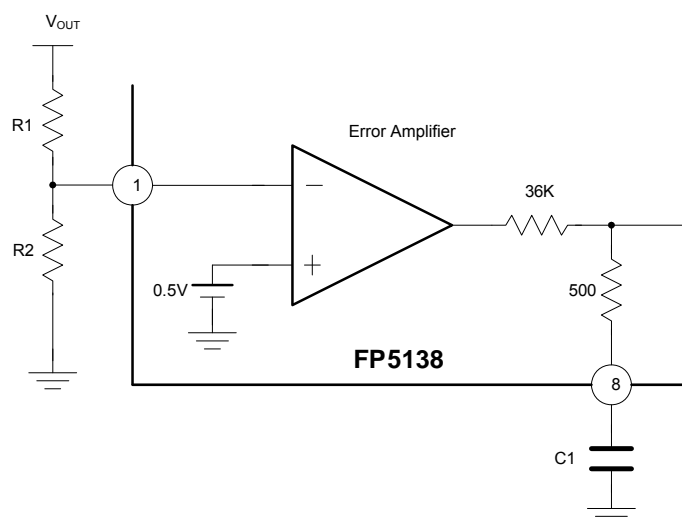

### Voltage Reference

A 1.25V regulator operating from  $V_{CC}$  is used to power the FP5138 internal circuitry. An internal resistive divider provides 0.5V reference for the error amplifier, Soft-start (typ. 0.9V) and SCP (typ. 0.8V) circuits.

### Error Amplifier

The error amplifier compares a sample of the DC-DC converter output voltage to the 0.5V reference and generates an error signal for the PWM comparator. Output voltage of DC-DC converter is setting with the resistor divider using the following expression (see figure12):

$$V_{OUT} = \left(1 + \frac{R1}{R2}\right) \times 0.5$$

.Figure 12 Error Amplifier with Feedback resistance divider

### Oscillator

The oscillator frequency can be set from 20KHz to 1MHz by connecting a resistor and a capacitor at OSC pin of FP5138 to ground. The oscillator frequency can be determined by using the graph shown in Figure 9.

The oscillator output is a sawtooth wave with a minimum value of approximately 0.1V and a maximum value of approximately 0.8V. The PWM comparator compares the oscillator voltage with error amplifier output voltage, internal maximum duty control voltage (typ. 0.6V) and soft start setting voltage. When the sawtooth wave voltage is lower than all of above three-output voltage, the output of FP5138 is high (Turn on external NPN transistor or NMOS).

## Under Voltage Lockout (UVLO)

The under voltage lockout circuits turn the output off and whenever the supply voltage drops too low (approximately 0.9V at 25°C) for proper operation. A hysteresis voltage of 200mV eliminates false triggering on noise and chattering.

## Soft Start/ Short-circuit protection (SS / SCP)

The soft start is functional after power on. The interval of soft start time is determined by a capacitor connected to SCP pin (pin 2). When soft start function finished, the internal soft start voltage is setting high, but external SCP pin is setting low in order to change to short circuit detection / protection function.

The time of soft start is:

$$T_{ss} = 0.35 \times C[\mu F]$$

The short circuit protection is functional due to a heavy loading drop and output of error amplifier (COMP pin) is maintain larger than  $V_{POS}$  (typ. 0.9V), the capacitor is charged until SCP threshold voltage (typ. 0.8V), then FP5138 output is disable (internal pull-low) and the capacitor is discharged to low.

The time of short circuit protection is:

$$T_{scp} = 0.8 \times C[\mu F]$$

## Output transistor

The FP5138 has a totem-pole transistor with a 40mA source/sink current rating to drive an external NPN transistor or NMOS directly. The driving current capability depends on a resistor R that is connected to BR/CTL pin (Pin4) of FP5138. (see figure 13)

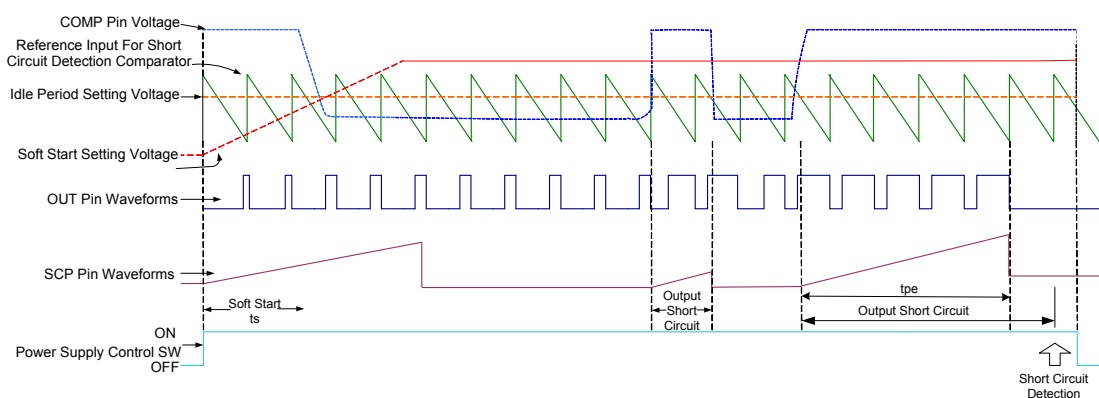

Figure 13 Output transistor driving control circuit

BR/CTL pin can also use to control the output of FP5138 for disable or enable function of system.

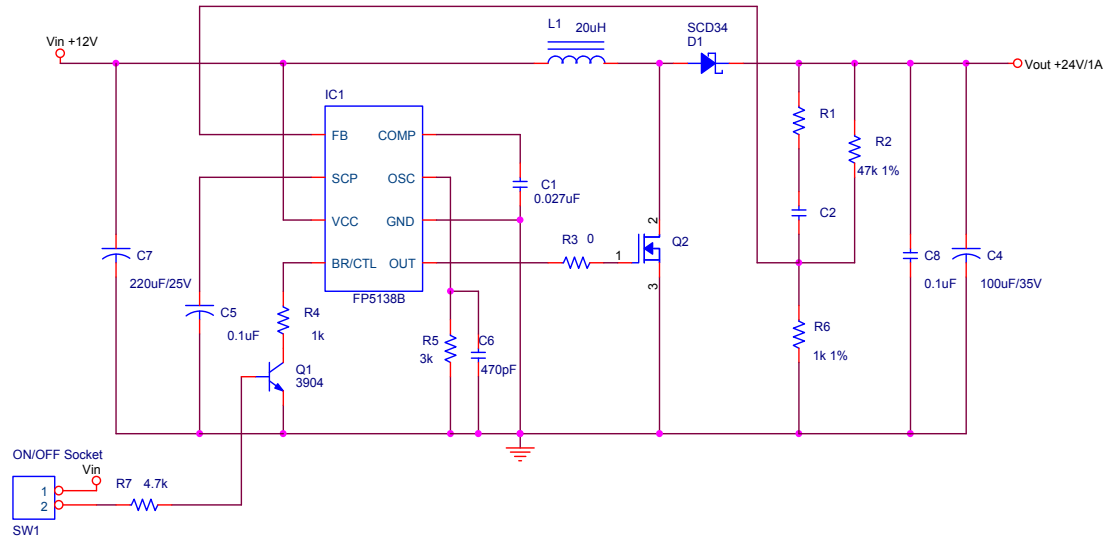

Control Pin	Q1	BR/CTL Pin	Output Transistor Function	Mode
Low	Off	Open	Disable	Stand-by
High	On	Bias Current	Enable	Operation

## Package Outline

SOP-8L

UNIT: mm

Symbols	Min. (mm)	Max. (mm)
A	1.346	1.752
A1	0.101	0.254
A2	1.092	1.498
D	4.800	4.978
E	3.810	3.987
H	5.791	6.197
L	0.406	1.270
$\theta^\circ$	0°	8°

### Notes:

1. Package dimensions are in compliance with JEDEC outline: MS-012 AA.
2. Dimension "D" does not include molding flash, protrusions or gate burrs.
3. Dimension "E" does not include inter-lead flash or protrusions.

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.

**TSSOP-8L**

**UNIT: mm**

Symbols	Min. (mm)	Max. (mm)
A		1.200
A1	0.050	0.150
A2	0.960	1.060
D	2.900	3.100
E	6.400 BSC	
E1	4.300	4.500
L	0.450	0.750
$\theta^\circ$	0°	8°

**Notes:**

1. Package dimensions are in compliance with JEDEC outline: MO-153 AA.
2. Dimension "D" does not include molding flash, protrusions or gate burrs.
3. Dimension "E1" does not include inter-lead flash or protrusions

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.
